Side and front panels for CaravanStore

The panels are available to be attached to FIAMMA CaravanStore and CaravanStore XL, which is usually installed in a caravan. The optimum height for which it is available is 245 cm, there being a reasonable margin in both directions and the anchors are adjustable in height.

They are made of polyester PVA RipStop, fully breathable, very light and resistant. The combination of colors is unique and universal, blue and grey that fit perfectly with Caravanstore tones. The panels are sold separately providing great flexibility in the combinations.

The sides have a wide window with the option to include curtains. The frame (roof pole) is made of anodized aluminum.

The front is configured for the different Caravanstore and has in all cases a roller door, with zip and one/two windows also with option to fit curtains.

The front and the side are attached to cotton tapes, to the legs of the canopy itself. In this way we gain in lightness and flexibility. Also available in an adaptable version to F35 canopies in all its dimensions, matching all its specifications.

Stela 350

Stela 250

Available in three versions: standard in 250 cm depth, with extra space in 300 cm and also in 350 cm. It is an attractive awning, with a new and refined design and an elegant combination of colors.

The front consists of 4/6 panels, all removable and interchangeable, 3/4 of them consist of fixed windows and smooth design, the other/s has a sliding door to any position thus offering all the possibilities of transformation.

Each side is removable and has a door and a folding window with mosquito net. In the 350 cm model we add a fixed window.

This model can be completely closed, since it has covers on the windows. It can also be used as a sunshade and, optionally, the panels can be installed as front and side balconies.

How to choose your awning?

INACA offers a wide range of awnings. Each of them has different performance qualities to satisfy every caravanner's specific needs. Therefore, it is very important to choose an awning that suits your needs. Do not hesitate to ask your distributors for advice. Their professional assessment will help you with your choice.

Which is the most suitable awning for your caravan?

When buying your awning, our distributors will need to know the brand, model, and year of your caravan. If you are unsure about any of these facts, INACA offers you a quick and efficient guide classifying the awning's size according to the perimeter of each caravan.

For instance:

If your caravan has a perimeter of 956 cm (measurement from A to B), the appropriate awning for you is V-950.

Some important suggestions

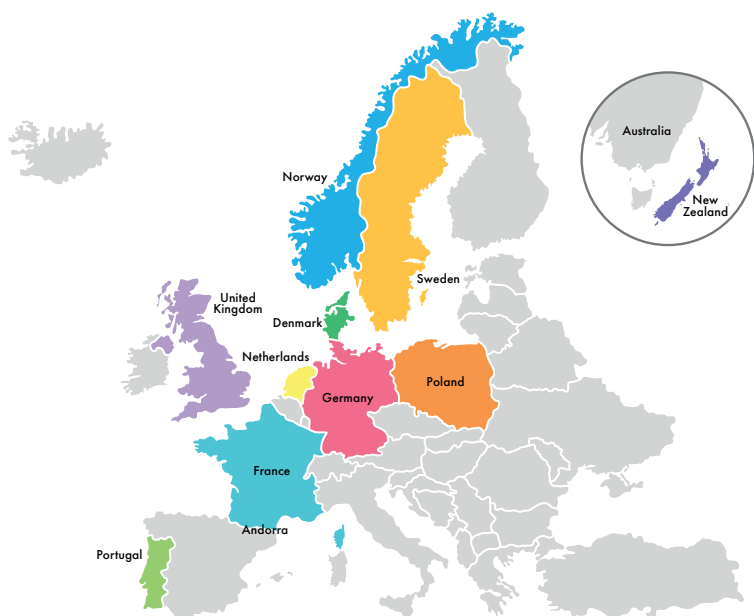

Always pay special attention at measuring the perimeter of your caravan; the correct selection of the size you require is a determinant factor for the proper erection of your awning. According to the different sizes the distribution of the front panel may vary. Pay attention at the diagrams in order to avoid misunderstandings. Never pack your awning when wet. Never clean your awning with products that may damage the materials. When you use your PVC awning for the first time under rainy conditions, it is possible that the seams may leak initially. The problem will disappear when the stitching has swollen into place over the following days use.
